Electromagnetic Vibrations, Waves, and Radiation

George Bekefi, Alan H. Barrett

Electromagnetic Vibrations, Waves, and Radiation George Bekefi, Alan H. Barrett

This text was developed over a five-year period during which its authors were teaching the subject. It is the culmination of successful editions of class notes and preliminary texts prepared for their one-semester course at MIT designed for sophomores majoring in physics but taken by students from other departments as well. The book describes the features that vibrations and waves of all sorts have in common and includes examples of mechanical, acoustical, and optical manifestations of these phenomena that unite various parts of physics. The main emphasis, however, is on the oscillatory aspects of the electromagnetic field -- that is, on the vibrations, waves, radiation, and the interaction of electromagnetic waves with matter. The content is designed primarily for the use of second or third year students of physics who have had a semester of mechanics and a semester of electricity and magnetism. The aim throughout is to provide a mathematically unsophisticated treatment of the subject, but one that stresses modern applications of the principles involved. Descriptions of devices that embody such principles -- such as seismometers, magnetrons, thermo-nuclear fusion experimental configurations, and lasers -- are introduced at appropriate points in the text to illustrate the theoretical concepts. Many illustrations from astrophysics are also included.

From reader reviews:

Andrew Schulz:

Spent a free time and energy to be fun activity to do! A lot of people spent their down time with their family, or their particular friends. Usually they doing activity like watching television, gonna beach, or picnic in the park. They actually doing same every week. Do you feel it? Will you something different to fill your current free time/ holiday? Could possibly be reading a book might be option to fill your cost-free time/ holiday. The first thing that you'll ask may be what kinds of publication that you should read. If you want to test look for book, may be the book untitled Electromagnetic Vibrations, Waves, and Radiation can be fine book to read. May be it can be best activity to you.

Theo Garcia:

You may spend your free time to learn this book this book. This Electromagnetic Vibrations, Waves, and Radiation is simple to bring you can read it in the park, in the beach, train along with soon. If you did not have much space to bring often the printed book, you can buy the particular e-book. It is make you quicker to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when you buy this book.

Jeremy Reed:

Don't be worry should you be afraid that this book will probably filled the space in your house, you might have it in e-book method, more simple and reachable. This particular Electromagnetic Vibrations, Waves, and Radiation can give you a lot of good friends because by you considering this one book you have issue that they don't and make an individual more like an interesting person. That book can be one of one step for you to get success. This guide offer you information that perhaps your friend doesn't know, by knowing more than some other make you to be great people. So , why hesitate? Let us have Electromagnetic Vibrations, Waves, and Radiation.

Martha Bryant:

Reserve is one of source of understanding. We can add our information from it. Not only for students but in addition native or citizen want book to know the revise information of year in order to year. As we know those books have many advantages. Beside we all add our knowledge, also can bring us to around the world. By book Electromagnetic Vibrations, Waves, and Radiation we can get more advantage. Don't you to be creative people? Being creative person must choose to read a book. Just choose the best book that ideal with your aim. Don't be doubt to change your life at this time book Electromagnetic Vibrations, Waves, and Radiation. You can more inviting than now.
