The Design of Experiments in Neuroscience Mary Harrington

Intended to meet the needs of a student who wishes to begin research in the field of neuroscience or biological psychology, this book provides background to the scientific method, and the use of both experimental and non-experimental research designs. Using examples from published studies in neuroscience, the text discusses control of variables and analysis of results, with a focus on the logic of experimental design. Ethical issues associated with neuroscience research are considered and guidelines are described. Statistical concepts are discussed within the context of the research examples. Many exercises are provided to allow students to apply their knowledge and test their understanding. The background in research skills that this book provides will help students succeed in their research endeavors.
