Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises)

Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises)

Remote Sensing of Drought: Innovative Monitoring Approaches presents emerging remote sensing-based tools and techniques that can be applied to operational drought monitoring and early warning around the world. The first book to focus on remote sensing and drought monitoring, it brings together a wealth of information that has been scattered throughout the literature and across many disciplines. Featuring contributions by leading scientists, it assembles a cross-section of globally applicable techniques that are currently operational or have potential to be operational in the near future.

The book explores a range of applications for monitoring four critical components of the hydrological cycle related to drought: vegetation health, evapotranspiration, soil moisture and groundwater, and precipitation. These applications use remotely sensed optical, thermal, microwave, radar, and gravity data from instruments such as AMSR-E, GOES, GRACE, MERIS, MODIS, and Landsat and implement several advanced modeling and data assimilation techniques. Examples show how to integrate this information into routine drought products. The book also examines the role of satellite remote sensing within traditional drought monitoring, as well as current challenges and future prospects.

Improving drought monitoring is becoming increasingly important in addressing a wide range of societal issues, from food security and water scarcity to human health, ecosystem services, and energy production. This unique book surveys innovative remote sensing approaches to provide you with new perspectives on large-area drought monitoring and early warning.

From reader reviews:

Thomas Fleischmann:

As people who live in often the modest era should be revise about what going on or data even knowledge to make these individuals keep up with the era which can be always change and move forward. Some of you maybe will update themselves by reading books. It is a good choice for yourself but the problems coming to you actually is you don't know what type you should start with. This Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises) is our recommendation to help you keep up with the world. Why, as this book serves what you want and wish in this era.

Margaret Calderon:

Reading a e-book tends to be new life style within this era globalization. With reading you can get a lot of information that could give you benefit in your life. Using book everyone in this world could share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their own reader with their story or their experience. Not only the storyline that share in the books. But also they write about the data about something that you need illustration. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that exist now. The authors in this world always try to improve their proficiency in writing, they also doing some exploration before they write with their book. One of them is this Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises).

Carol Ramirez:

You will get this Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises) by look at the bookstore or Mall. Simply viewing or reviewing it could to be your solve difficulty if you get difficulties for the knowledge. Kinds of this publication are various. Not only by means of written or printed but in addition can you enjoy this book through e-book. In the modern era similar to now, you just looking by your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still update. Let's try to choose suitable ways for you.

Richard Moultrie:

What is your hobby? Have you heard that question when you got college students? We believe that that issue was given by teacher with their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person similar to reading or as looking at become their hobby. You should know that reading is very important and also book as to be the matter. Book is important thing to include you knowledge, except your personal teacher or lecturer. You get good news or update in relation to something by book. Many kinds of books that can you go onto be your object. One of them is Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises).
