## **ACI 332M-14: Residential Code Requirements for Structural Concrete (ACI 332M-14) and Commentary** ACI Committee 332 METRIC VERSION

The “Residential Code Requirements for Structural Concrete” cover the design and construction of cast-in-place concrete for one- and two-family dwellings and multiple single-family dwellings (townhouses), and their accessory structures. Among the subjects covered are the design and construction requirements for plain and reinforced concrete footings, foundation walls, and slabs-on-ground, and requirements for concrete, reinforcement, forms, and other related materials.

The quality and testing of materials discussed in this document are covered by reference to the appropriate ASTM standards. The Code is written to allow for reference by adoption in a general building code without changing its language. Background details or suggestions for carrying out the requirements or intent of the Code are provided in the commentary. The commentary discusses some of the considerations of the committee in developing the Code with emphasis given to the explanation of provisions that may be unfamiliar to code users or where significant departure exists from other concrete codes. Commentary provisions begin with an “R,” such as “R.1.1.1,” and commentary text is shown in italics. Relevant resource documents are cited for the user desiring more detailed study of individual issues.
